Summary of Results

	Pre-Project	Post-Project	% Reduction
Threshold Event	0.05"	1"	-
2-Year Event (2.91" rain)			
Runoff Volume (inches)	2.2	1.38	37%
Peak Flow (cfs)	19.2	3.8	80%
10-Year Event (4.31" rain)			
Runoff Volume (inches)	3.49	2.53	28%
Peak Flow (cfs)	29.8	5.8	81%
100-Year Event (6.36" rain)			
Runoff Volume (inches)	5.44	4.35	20%
Peak Flow (cfs)	45.8	8.3	82%

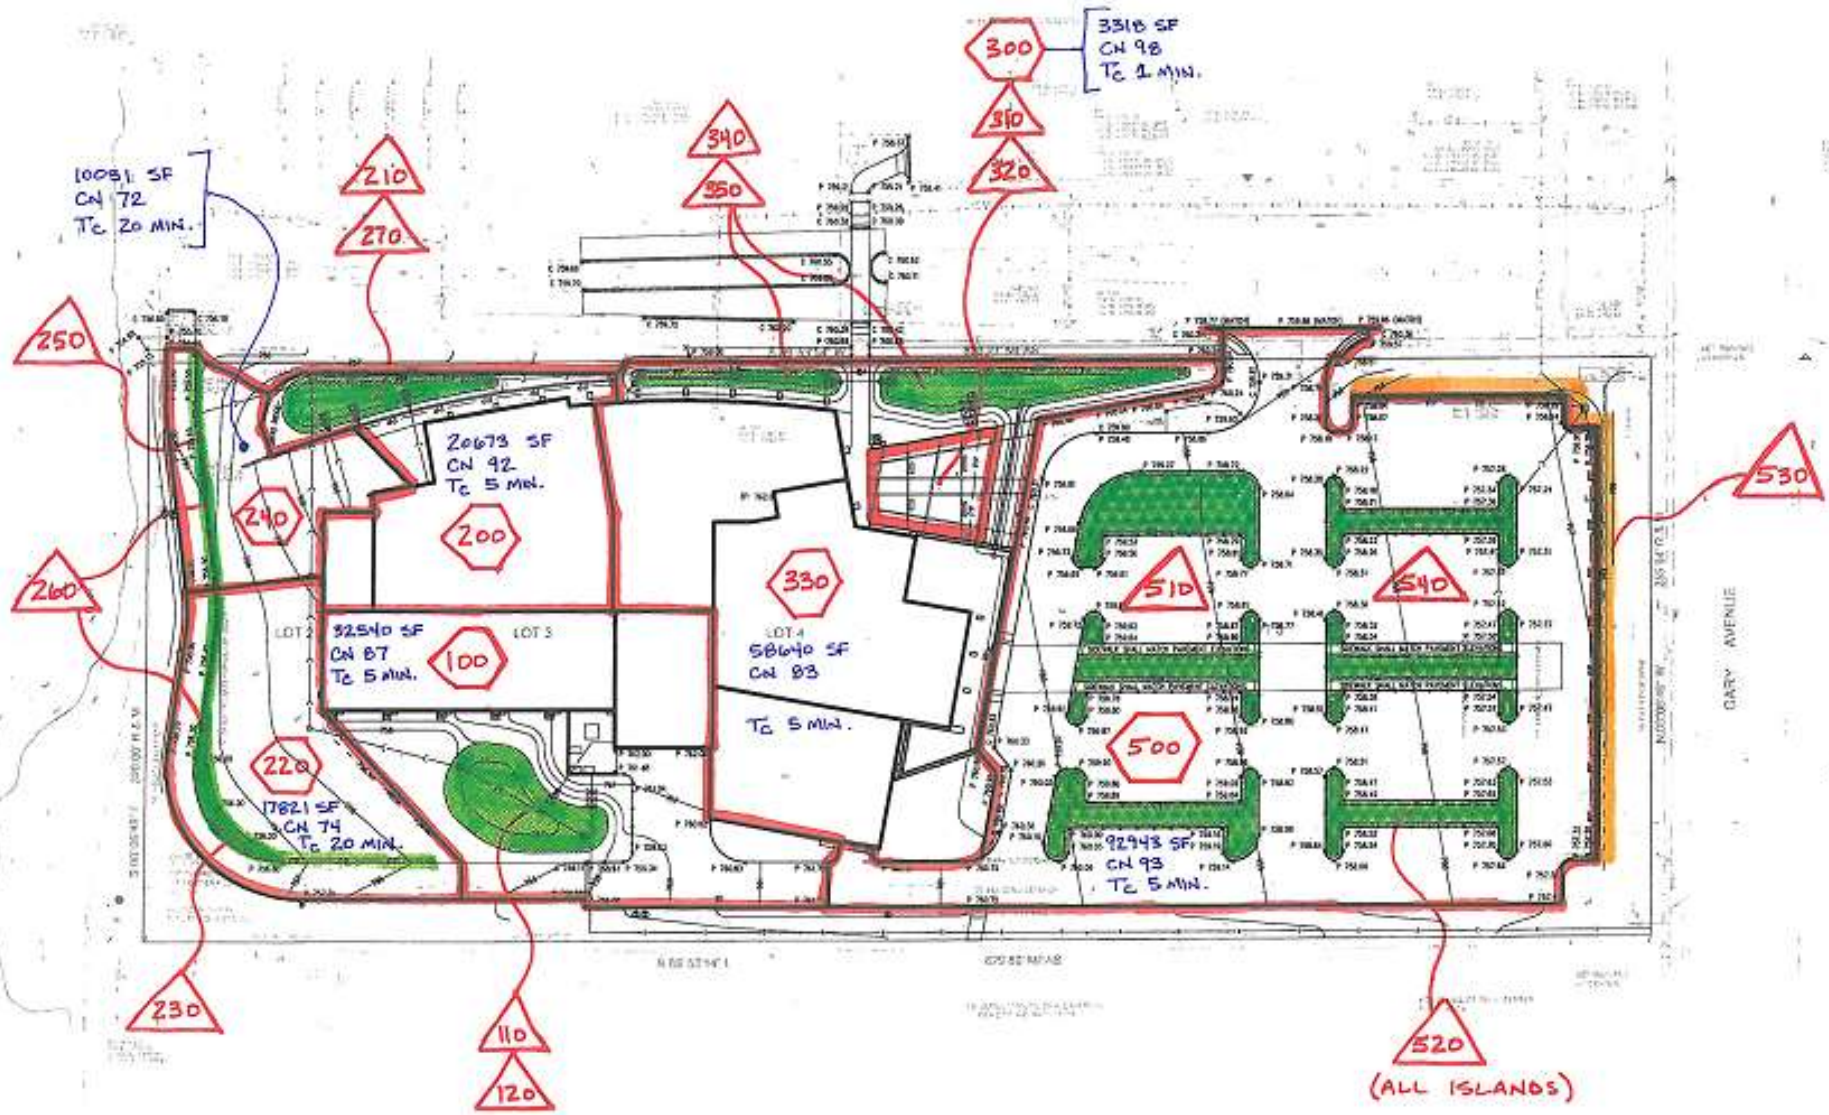
Site Plan

Engineering and Science Based Approach



Site Objectives

- LEED Sustainable Sites
- Highest Environmental Performance
- Reduced Irrigation
- Increased Longevity
- Cost Effective

Construction

Environmental Performance

- 2-Year Runoff Rate Reduction = 95%
- 2-Year Runoff Volume Reduction = 70%
- Sediment Load Reduction = 90%
- Metals Load Reduction = 90%
- Phosphorous Load Reduction = 65%
- Potential Deicing Salt Reduction = 75%
- Elimination of Asphalt Sealants
- Reduced Irrigation Demand

Economic Considerations

- Cost: ~24% premium for permeable paving system but 11 year ROI
- Longevity: 50 year pavement life
- Safety: Reduced nuisance ponding & icing
- Space efficiency: Integration of stormwater & landscape
- Water Efficiency: Reduced Irrigation
- Aesthetics: Brick paving, lush landscapes
- Environmental performance improvements

DuPage County Water Quality Improvement Program Grant

- Reduces Pollutants of Concern
- Reduces Non-Point Source Pollution
- Reduces Streambank Erosion
- Restores Pre-Development Hydrology
- Educates Community Leaders & Citizens
- Grant = $117,133 (20% of expenses)

LOST VALLEY

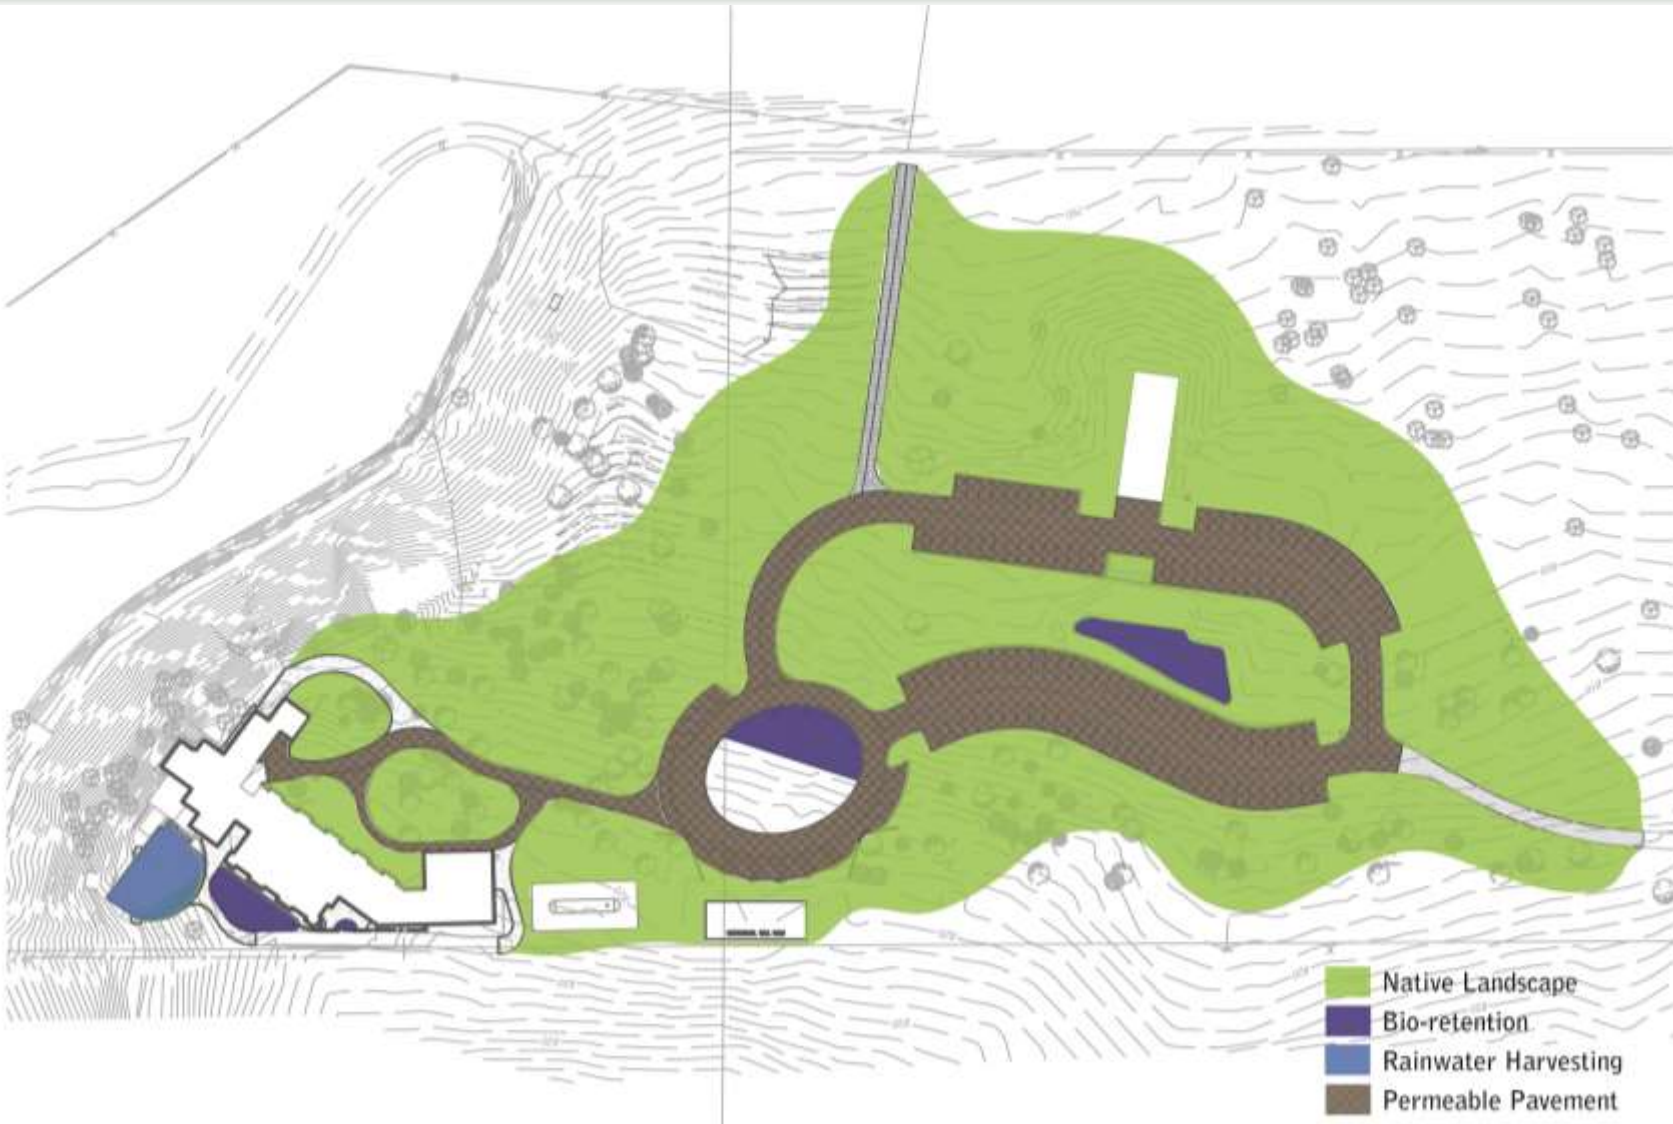
Design Implementation – Sustainable Sites

D. Sustainable Site Practices

1. Replicate natural hydrology on all land use surfaces through the integration of high-performance "green infrastructure" strategies for multiple, stacked benefits:
    a. Porous pavement
    b. Bio-retention
    c. Native landscapes

LOST VALLEY

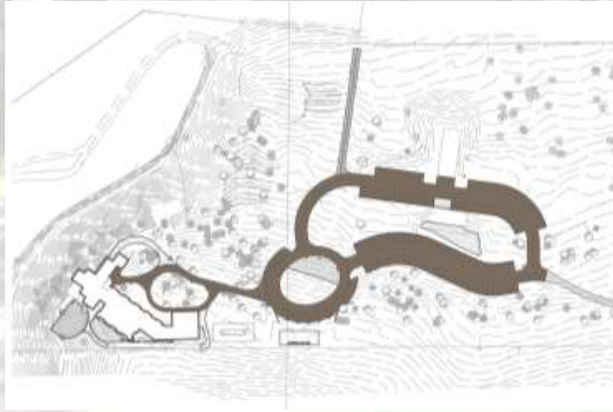
Design Implementation – Sustainable Sites



LOST VALLEY

Design Implementation – Sustainable Sites

a. Porous Pavement- Interlocking Concrete Unit Pavement System
   i. Slows, cools, cleanses, and infiltrates rainwater
   ii. Durable, longer-lasting
   iii. Reduced maintenance costs
   iv. Improved winter-time characteristics
   v. Traffic calming
   vi. Aesthetic characteristics
   vii. Educational opportunitie



LOST VALLEY

Design Implementation – Sustainable Sites

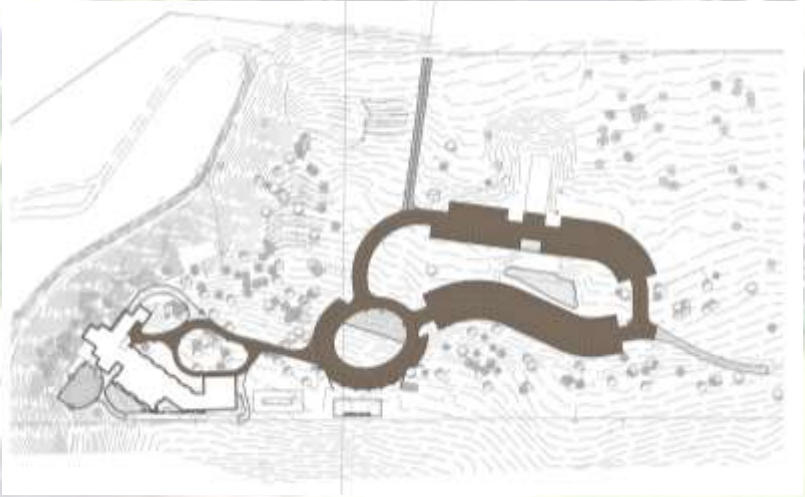
b. Bioretention - Rain Gardens and Bioswales
   i. Slows, cools, cleanses, and infiltrates rainwater
   ii. Improves biodiversity
   iii. Reinforces native landscape character
   iv. Educational opportunities



LOST VALLEY

Design Implementation – Sustainable Sites

2. Detention / Evaporation
   a. Adaptive re-use of pool
   b. Slows, cools, cleanses, and infiltrates rainwater
   c. Expands usable, programmable outdoor space

Project Performance

Table 3 - Estimated Runoff Rates & Volumes

Event	Pre-Development		Post Development	
	Peak Discharge (cfs)	Runoff Volume (ac-ft)	Peak Discharge (cfs)	Runoff Volume (ac-ft)
1-yr	4.05	0.28	0.06	0.07
2-yr	7.07	0.44	0.10	0.14
100-yr	42.90	2.44	0.84	0.98

LOST VALLEY

Design Implementation – Sustainable Sites

3. Native Landscapes – Adapted prairie grasses and forb species
   a. Slows, cools, cleanses, and infiltrates rainwater
   b. Improves biodiversity
   c. Reinforces authentic landscape character
   d. Improves habitat
   e. Educational opportunities
